

CA-12T Call Alarm System

Introduction

CA-12T is a device that can produce sound signal along with an optical indication once a button in the zone(s) connected is pushed. It can easily be fitted on the bulkhead of the ship and connected to call buttons in a parallel network as shown at figure 1.

Usage

Once a button connected to a zone is pushed the CA-12T beeper sounds for 3 seconds and LED flashes until the RESET button located on the CA-12T is pushed.

Connection Diagram

Power supply can vary from 15 to 30 Volt DC and should be connected as shown at figure 1. Normally open button should be connected parallel as shown at figure 1.
